**Attachments:** CPF memo addressing TCE per EPA Reg 9 request Oct 2014.pdf

Patrick

The attachment contains a memo from Sarah Foster of CPF Associates regarding questions you had on TCE ambient air concentrations associated with the Evoqua facility in Parker, AZ.

Please let me know if you have any questions regarding the memo or require further information.

Thanks.

**Attachments:** Status of Tanks Holding Recycle Water.pdf

Mike

Hopefully this helps explain the regulatory status of our recycle water tank (T-9). This has been discussed and EPA has concurred several times with our interpretation T-9.

**Attachments:** App Ag RF-2 Residence.pdf

### ***Moisture and Oxygen Correction:***

Emissions of stack gases are usually expressed on a dry gas basis so that variations in the moisture content of the stack gas do not affect the assessment of the emissions.

$$\text{Dry Gas Concentration } \left( \frac{mg}{m^3} \right) = \text{wet gas concentration} \times \frac{100}{100 - \% H_2O}$$

The instruments used to measure the composition of flue gases (for instance Oxygen) remove water vapor from the gas sample prior to the sample going to the analyzers. Hence they give a dry gas reading

The attachment above includes the calculation of residence time of the furnace. It can be found in Appendix Ag of the Performance Demonstration Test Report.

**Subject:** Article  
**Attachments:** HeK\_2012.pdf

Mike

We came across the attached article. I am not certain who Katherine He is, but she has many incorrect assumptions and I am not sure what the motivation is behind the paper.

The most glaring error (and there too many to mention) was the "electric generation footprint" calculation. All our power comes from the Headgate Rock Dam (BIA) which is a hydroelectric generating facility. I will need some help understanding how CO2, NOX and SOX comes from such a facility. As usual, Ms. Scheuermann, who is thanked for her input and help, never has been one to let facts get in the way of her agenda.

Hopefully our tax dollars were not invested in this effort.

**Sent:** Monday, July 21, 2014 2:50 PM  
**To:** Zabaneh, Mahfouz  
**Cc:** Provins, James R; Bailey, William N  
**Subject:** Response to Comments Received from USEPA Region 9 (Letter Dated May 15, 2014)  
**Attachments:** Section L - Certification Rev2~07-2014.pdf; FINAL Evoqua Response - Request for Information July 22 2014.pdf

Mike

The attachment contains Evoqua Water Technologies' response to comments received from USEPA Region 9 in a letter dated May 15, 2014.

A hardcopy of the response to comments and a USB flash drive with the electronic versions of the modified sections, appendices and the table of contents will be delivered to your office Tuesday, July 22, 2014 via UPS.

The Evoqua Part B certification (Section L) - dated July 22, 2014 - arrived via email after the package had been picked up by UPS this afternoon. You can find it in the second attachment to this email.

Thanks for working with us on the submittal date extension.

Please let us know if you have any additional questions.

<<WS-3 Carbon Changeout Log.pdf>> <<WS-1 Carbon Changeout Log.pdf>> <<WS-2 Carbon Changeout Log.pdf>>  
<<Appendix D - Engineering Calcs.pdf>>

Mike

Per your request I have attached the facility's carbon replacement logs for the last two years and the calculations that reflect the change out period as are required for FF (and therefore CC) compliance.

It is important to note the calculations make the assumption that there is 30 wt% (300,000 mg/kg) of benzene loading on the spent carbon. In reality, this assumption is almost impossible but it is used as a conservative figure for the engineering calculations. On average over the years, the **total volatile organics** on the spent carbon Parker has received is **less than 1 wt%**.

We have concluded over the last two years that the calculations are valid based on periodic testing of the carbon bed outlet right before change out. The Subpart FF regulations threshold is 500 ppm. The FID (Flame Ionization Detector) we use to measure the outlet of the absorbers measures **all volatile organics**, not just benzene. This adds an additional layer of conservatism for FF compliance and assures that all organics combined in the outlet stream are less than 500 ppm.

I will send you the Federal Register next week reflecting that EPA granted facilities the option of using FF regulations to comply with Subpart CC.

Thanks.
